

Intelligence Modeling & Simulation for Evaluation (IMASE)

T&E Days

US Army Operational Test Command

Purpose

- To provide information on IEWTD initiatives of Modeling, Simulation & Instrumentation (M&S&I) in support of operational testing and, secondarily, other domains under the tenets of Simulation Based Acquisition (SBA) and Simulation & Modeling for Acquisition Requirements & Training (SMART).

Agenda

- Requirements
- M&S Availability
- IMASE Program
- Capabilities-Creating the Operational Test Environment
- IMASE Availability

Requirements & Guidance (T&E)

- Regulations:
 - DoD 5000.2 requires T&E
 - AR 73-1, supporting 5000.2
 - AR 381-11, Production Requirements and Threat Intelligence Support to the U.S. Army
 - ATEC PAM 73-1, supporting AR 73-1
 - Conduct T&E of acquisition systems
 - Mission-Oriented Evaluations (TOC “value added”)

Requirements & Guidance (M&S)

- M&S
 - DoD 5000.59, M, P
 - Simulation Based Acquisition (SBA)
 - Simulation for Modeling Acquisition Requirements and Training (SMART)
 - Simulation, Test & Evaluation Process (STEP)
 - Use M&S whenever and wherever possible

IEWTD Operational Test Mission (Macro)

- Support and enable operational testing of IEW systems (sensor and processing) in order to provide validated M&S support in an efficient, consistent and cost effective manner.
- Provide the environment to support mission oriented evaluations.

Test Support Approach

SUCCESSFUL TESTING PROGRAM

M&S&I Effort, Foundation

IEWTD M&S&I

Mission Requirements

- **Object (entity) level resolution**
- **High-fidelity products**
- **Multiple Security Levels**
- **Causality**
- **Live, virtual, constructive**
- **Interactive (short of freeplay)**
- **Interface with other M&S Federations**
- **TRADOC Defense Planning Guidance derived scenarios**

IEWTD M&S&I Uniquely Qualified to Provide “Threat-based Capability”

Creating the Operational Test Environment Using M&S&I

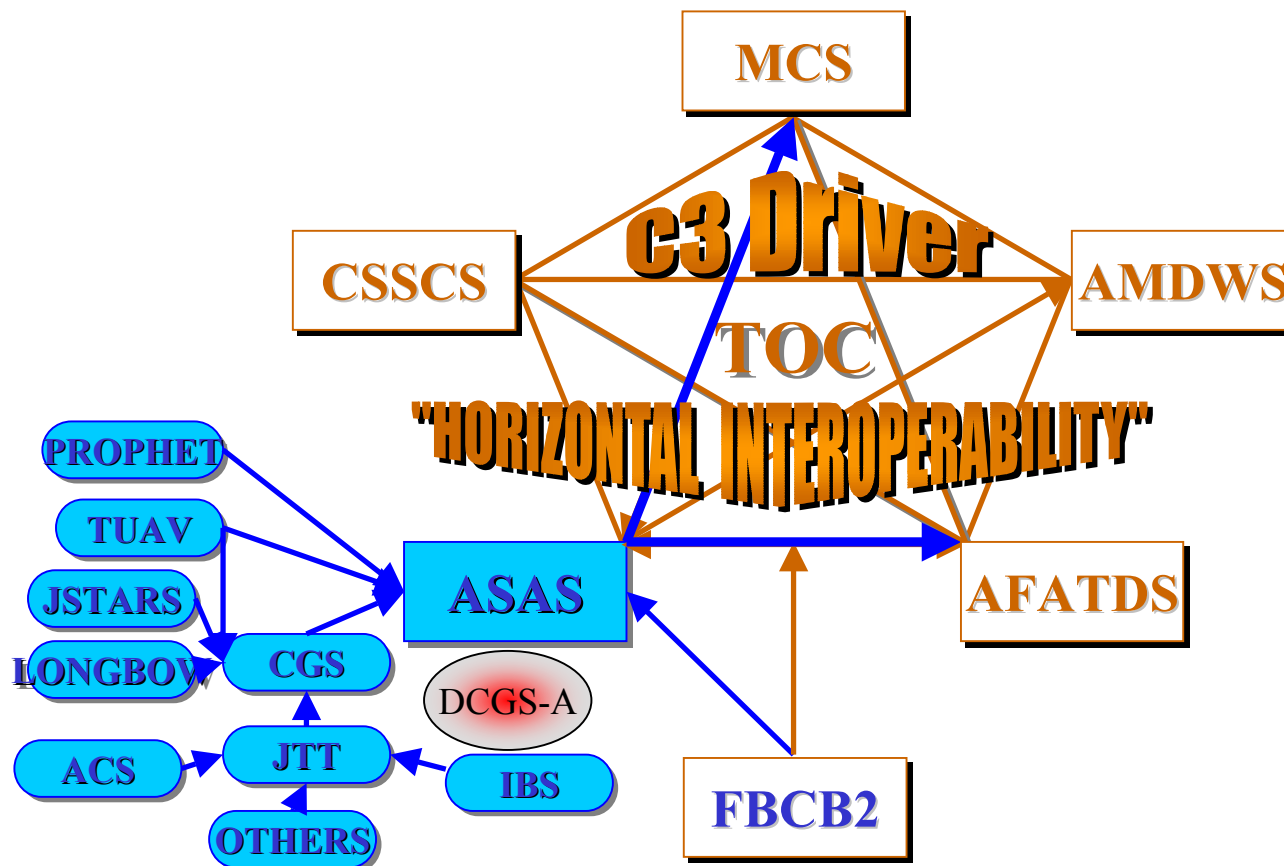

Other DoD M&S Options

- Generally, DoD MODSIMs are designed for training or T&E of areas other than IEW/ISR. They lack the rigor and fidelity required for the approach needed for IEW/ISR T&E.

T&E M&S&I, C3 Driver and IMASE - Comparison/Contrast

C3 Driver - Drives the ABCS (Horizonatal Interop.)

IMASE- Drives the IEW/ISR-Internal BOS Structure

IMASE, ISSS, ISGT, COMSIM

Program Description

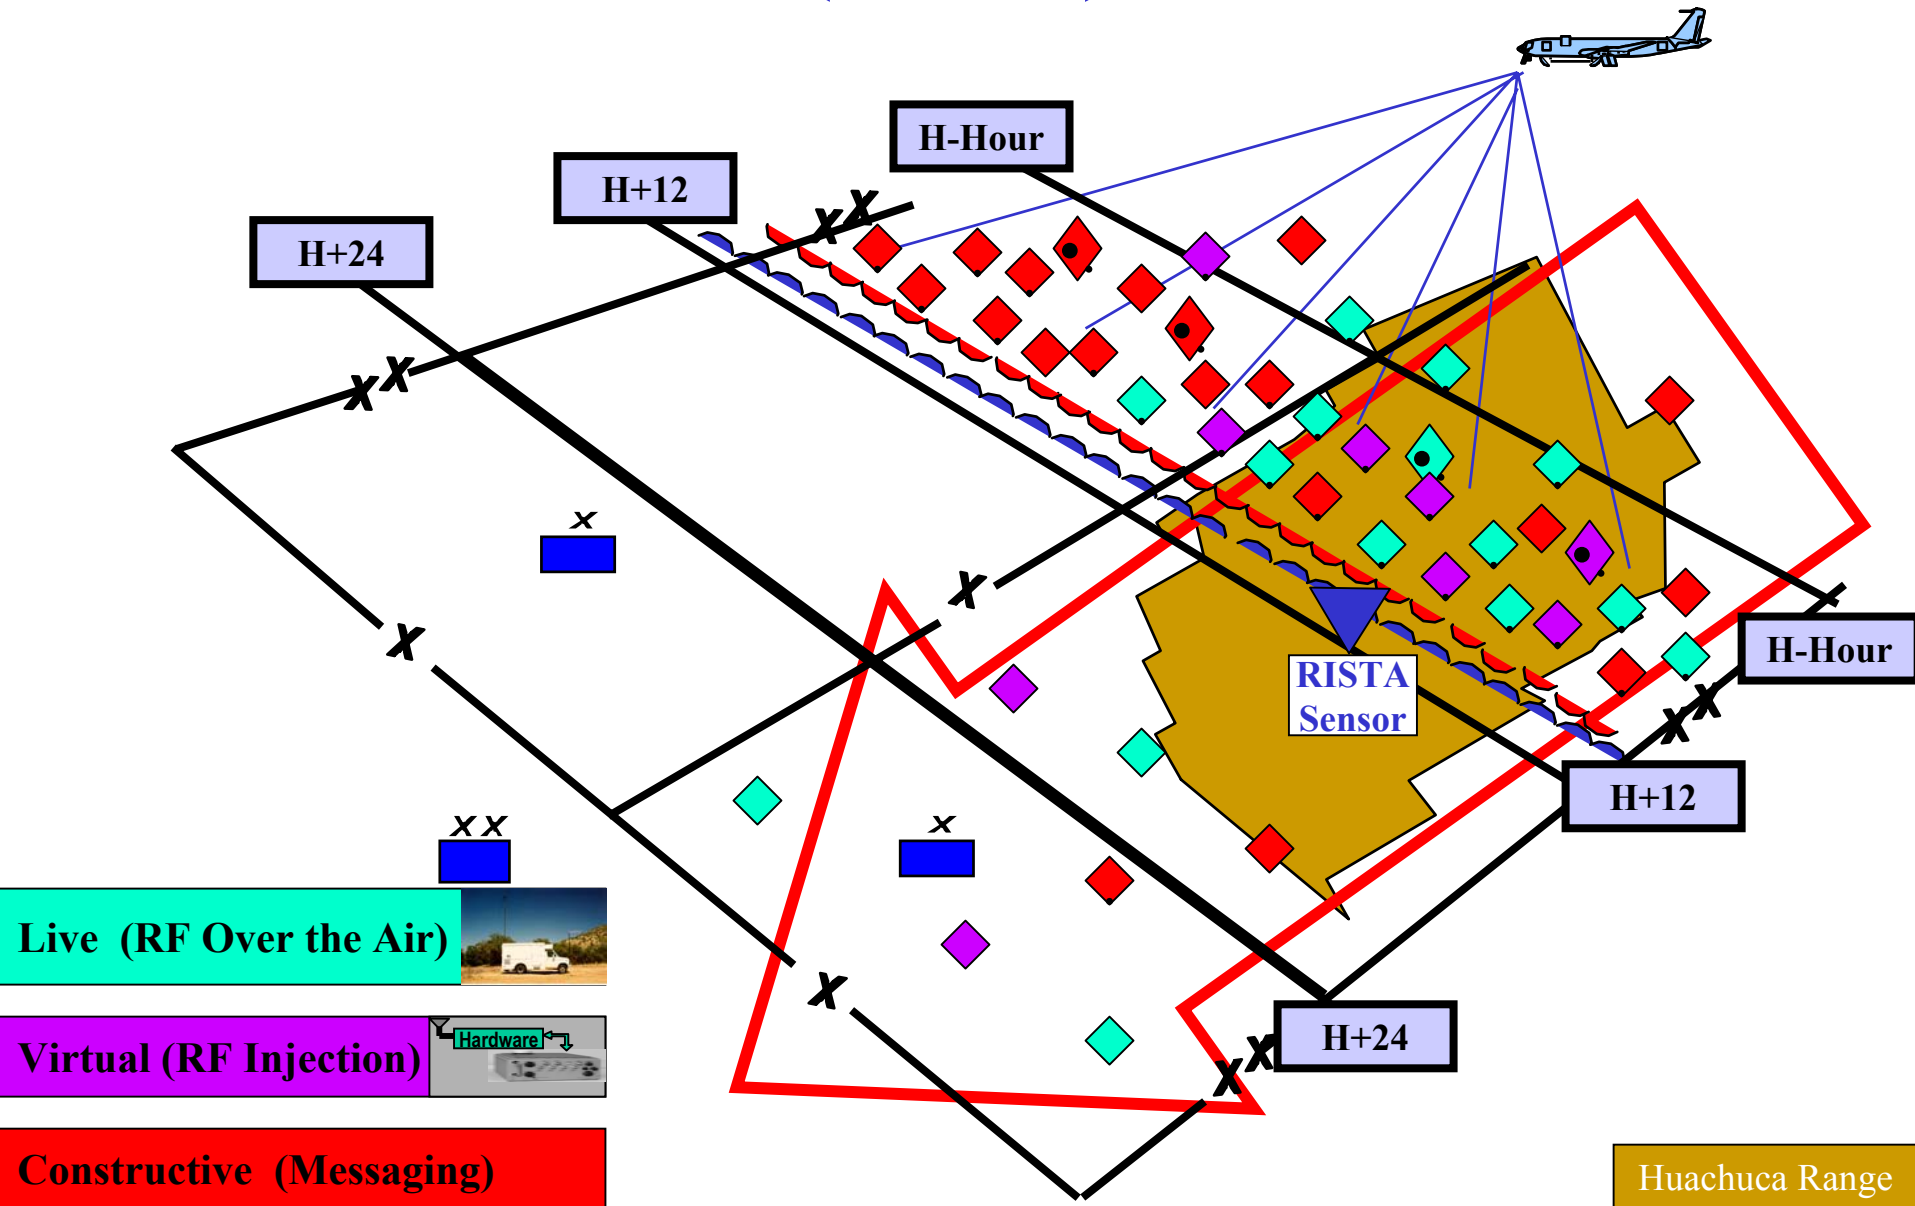

- **IMASE** - Overall ATEC IEWTD program to develop a simulation environment for the seamless integration of live/constructive/virtual entities in a test environment. Consists of Scenario Development., Product Development., Product Delivery, and System Under Test Scoring.
- **ISSS** - M&S portion which includes simulation, product development (digital, graphics), product delivery and scoring.
- **ISGT*** - The scenario generation tool used to develop the IMASE simulation and threat scenarios. Provides theater to entity level definition of the battlefield to support intelligence product development. Provides simulation control in the COMSIM/RF environment.
- **COMSIM***-The tool used to develop & deliver signals (live & virtual transmissions) represented in the ISGT scenario.

***Partnership with PM STRI, PM ITTS, TSMO**

Creating the Test Environment (Threat)

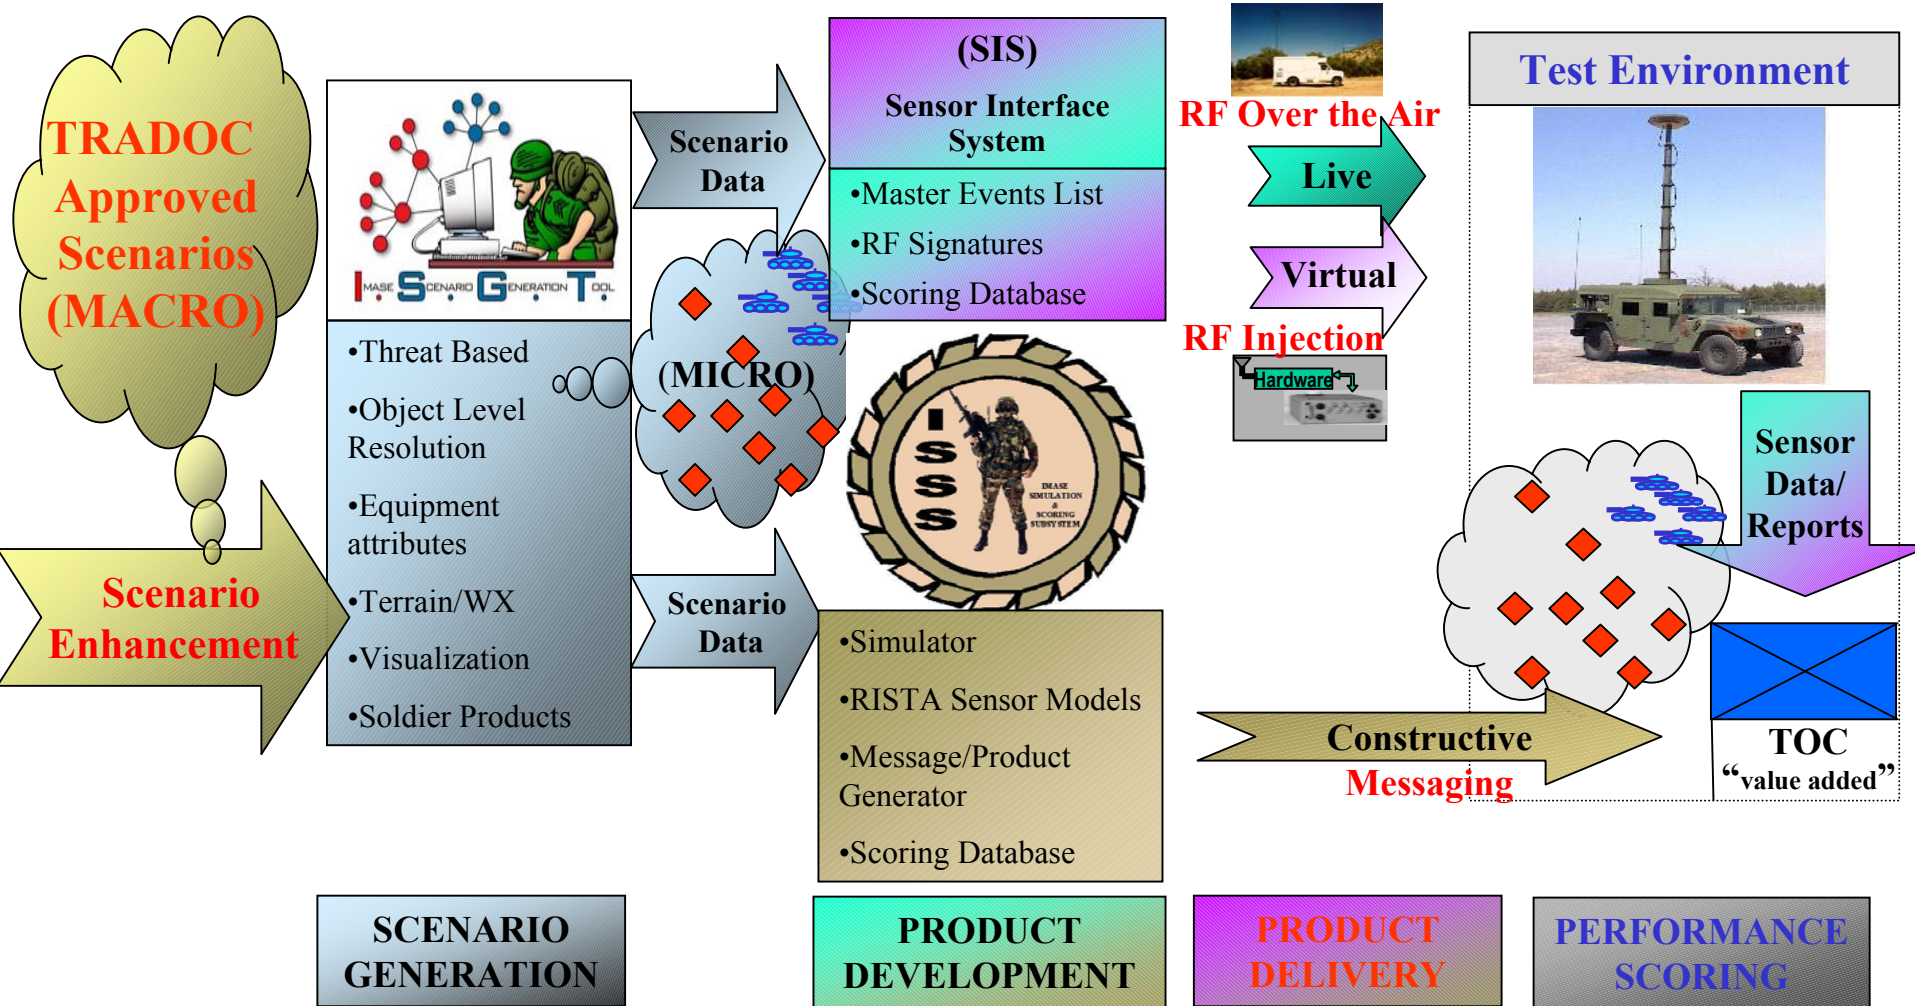

Creating the Test Environment (Threat)

Creating the Operational Test Environment via M&S&I

Uniquely Qualified to Provide the **Threat Test Environment**

M&S&I Solution for IEWTD

- IMASE Program Development
- Seek community partnership, sponsorship and advocacy
 - e.g. ATEC, OSD, DA DCSINT, PEOs, PMs
- Federate with other M&S, as appropriate

Ultimately focused on IEW/ISR support to Objective Force

IMASE Availability

- IOC = 31 Mar 03
 - Limited auto scenario generation capability
 - Robust simulator and messaging capability
 - Additional RF “over the air” capability
- FOC = 31 Mar 05
 - Full auto scenario generation capability
 - Robust delivery and scoring capability
 - Maturing RF injection capability
